CRC Industries Europe BVBA Environmental Policy and Management System

CRC Industries endeavours to provide an environmentally friendly business for its employees, neighbours and customers.

This policy is deployed through compliance with local, national and European legislation and incorporation of ISO 14000 and BATNEEC principles (Best Available Technology Not Entailing Excessive Costs) into CRC policies and procedures.

This policy is reflected into:

The selection of building blocks for our products whereby less harmful products are preferred and toxic and carcinogenic products are banned.

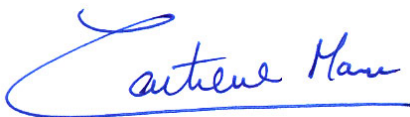

The minimisation of waste through the prime principle of avoidance complemented with internal re-use, use of a secondary raw material and recycling where possible based on a separate collection of different waste streams.

The operation of an emission monitoring program whereby emissions into air, soil and water are monitored based on legally required and voluntary schemes.

Continuous Improvement in performance is achieved through:

- yearly evaluation of performance measurements and action plans;
- consolidation of progress into yearly goals;
- cooperation with suppliers and customers on specific projects aiming at improving the overall environmental performance.

Our Environmental Policy and Management System is only one component of the global and integrated approach towards continuous improvement in Safety, Health, Environmental and Quality performances.
